

## MapVision® Aerial

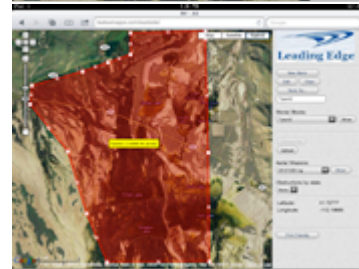

MapVision® Aerial is a powerful GIS GPS web-based mapping software technology that provides users the ability to design aerial missions for the Hemisphere GPS G4 & IntelliStar systems.

MapVision® Aerial provides users the following features:

Create Edit Save & Retrieve aerial treatment blocks:

Easily determine exact acres and product volume needed for treatment block:

Easily upload completed missions, displaying the flight recording data set that includes, location, time, date, aircraft ground speed, spray switch status, flow rate meteorology data, flight path, drift deposition prediction:

Display FAA obstructions in real-time with your treatment polygon:

Create JOB files with a single click:

Upload LOG files easily from any remote location:
